

GANIKDERMA®

Packaging Instructions:

Product code	Presentation form/ Dimension/ Quantity	No. of pieces/ individual box
C3010	Impregnated compress, 10 cm x 10 cm	10
A1501	Applicator with 15 ml ointment	1
T020	Tube with 20 ml ointment	1
T050	Tube with 50 ml ointment	1
T100	Tube with 100 ml ointment	1
R500	Recipient with 500 ml ointment	1

Presentation:

GANIKDERMA® ointment is a topical preparation with a barrier effect.

During the inflammatory phase of wound healing, thanks to its film-forming action, the ointment helps create a moist environment conducive to the natural removal of necrotic tissue (autolytic debridement). Its action is physical: the product keeps the exudate in contact with the necrotic tissue, thus promoting its separation without damaging the surrounding healthy tissue.

During the granulation phase, the semi-permeable barrier formed by the ointment helps maintain optimal moisture balance, a necessary condition for the formation of granulation tissue. Furthermore, thanks to the absorbent properties of the bismuth subgallate contained in its formulation, it helps manage excess exudate, which, in large quantities, can hinder healing. The semi-occlusive effect of the ointment supports the body's natural defenses by limiting the evaporation of exudates and thus preventing the formation of dry scabs, which can delay re-epithelialization.

Finally, the slightly acidic pH of **GANIKDERMA®** ointment (4.0–5.5) helps maintain a microenvironment physiologically conducive to healing, unfavorable to the proliferation of microorganisms that can compromise the healing process.

Indications :

- Adjuvant in the local treatment of acute wounds: first-, second-, and third-degree burns, abrasions, ulcers, traumatic wounds, and other superficial skin lesions.
- Adjuvant in the local treatment of pathological scars (hypertrophic and keloid scars).
- Adjuvant in the local treatment of pressure ulcers, chronic vascular ulcers, and diabetic foot ulcers.
- Adjuvant in the local treatment following chemical or laser peeling. - Adjuvant in the local management of the donor area during skin grafts.

- Adjuvant in the local management of epidermolysis bullosa.
- Adjuvant in the local management of moist eczema, contact dermatitis, psoriasis, and radiodermatitis.
- Adjuvant in the local management of acne and herpes lesions.

Instructions for use :

Before each use, it is recommended to wash your hands with soap and water and dry them. Clean the wound with saline solution (0.9% NaCl) or Ringer's solution before each application of the ointment, ensuring that any excess solution is absorbed. Apply the ointment to the entire wound in a 1 to 2 mm layer. Cover the wound with a sterile compress and/or a non-woven dressing, securing it with a dressing adhesive. Change the dressing every 1 to 2 days for ulcers and wounds. Apply 3 to 4 times a day for dermatological problems. The use of non-traumatic dressings is recommended, as the ointment prevents the gauze from adhering to the skin. Do not apply any other product topically, as this could alter the therapeutic properties of the ointment. Continue application until complete healing.

Warnings :

This product is for external use only; ingestion may cause digestive problems. No interactions or incompatibilities with other medications are known. Its use during pregnancy and breastfeeding has not been specifically studied; its use should be evaluated by a physician.

GANIKDERMA® does not affect the ability to drive or operate machinery.

Contraindications: Hypersensitivity to any of the ingredients.

Side effects :

Due to its mechanism of action, a burning sensation or local discomfort may occur immediately after application, sometimes accompanied by a fever around the lesion, which disappears spontaneously within 30 to 40 minutes. Itching may occur during the healing process. Avoid scratching the affected area to prevent irritation and damage to newly formed tissue. Local allergic reaction to any of the ointment's components.

No cases of overdose have been reported. No drug incompatibilities are known. Store the product below 25°C. Unused products and waste should be disposed of in accordance with local regulations.

Ingredients:

Beeswax, Olive Oil, Calendula, Sunflower Oil, Hydrogenated Castor Oil, Boswellia, Bismuth subgallate, Gum rosin, Camphor.
